

Using Stable Isotopes in Quantitation and Assessing Activity of Trace Compounds in Foods

Prof. Michael Rychlik

Head of the Chair of Analytical Food Chemistry
Technical University of Munich, Germany

Date : 7 March 2017 (Tuesday)
Time : 10:30 am – 11:30 am
Venue : SCM 809
Language : English
Facilitator : Dr. Simon Han

Abstract

Prof. Rychlik's group has been working for 15 years in the field of developing analytical methods for bioactive food components, in particular for vitamins, mycotoxins, odorants and lipids. For these compounds, he developed stable isotope dilution assays that reveal superior accuracy. Moreover, his research is focused on the application of these methods to recent areas in food chemistry, technology, toxicology and nutrition. Since 2014 Prof. Rychlik's serves as the Head of the "Committee on Contaminants in the Food Chain" at the Federal Institute for Risk Assessment, Berlin, Germany
